<http://geo.craigslist.org/iso/ca/sk> **Saskatchewan (SK) 2**

If you have a web site, Youtube video, blog or business you are trying to promote using Craig's List this is a great opportunity for you with the list above.

The only down side is Craig's List blocks you from running more than 3 ads in 3 days. But since it's robots that do the searching there are ways around them. Just write up 2 or 3 different ads and after your ad is typed in just scroll down about 20 times and plug in anything from any text generator, (try a paragraph from a dictionary), the robot will see this as something different and that is what you want. But if you are stopped just wait a couple days and try again.

Also if you start your web address with the [HTTP://www.and](http://www.and) so on Craigs List will show it as a clickable Hyper Link in your ad. But if you just type in www.anything it will NOT show up as a clickable link, and that could be important for your viewers response.
